

Index

A

Acetyl-CoA pathway, carbon dioxide fixation,
12–13, 18

Adaptation

Campylobacter, 160

horizontal gene transfer role, 47–48

α -Glucosidase, 178–179

Anaerobes

early evolution, 15–16

phylogenetic trees, 16–18

ANI. *See* Average nucleotide identity

Aquifex aeolicus, genome sequencing, 3

Average nucleotide identity (ANI), 140

B

Bacillus subtilis, genome sequencing, 3

β -Galactosidase, natural selection studies, 87–88

Borrelia burgdorferi, genome sequencing, 3

BRATNextGen, 125

Burkholderia, genome structure, 191

C

Cairns–Foster experiment, 98–102, 110–112

Campylobacter coli

adaptation, 160

evolution timescale, 164–165

horizontal gene transfer

genetic diversification, 159–160, 165

interspecies, 165–166

pathophysiology, 157–158

population structure

ecological basis, 162–164

overview, 160–162

prospects for study, 166–167

recombination and phenotype emergence, 165

sequence-based molecular typing, 158–159

Campylobacter jejuni

adaptation, 160

evolution timescale, 164–165

horizontal gene transfer

genetic diversification, 159–160, 165

interspecies, 165–166

pathophysiology, 157–158

population structure

ecological basis, 162–164

overview, 160–162

prospects for study, 166–167

recombination

phenotype emergence, 165

rates, 126

sequence-based molecular typing, 158–159

Carbon dioxide

fixation, 12–13, 18–19

formate from abiotic reduction, 18

Carsonella ruddii, genome sequencing, 5

Caulobacter crescentus, 193–194

CLONALFRAME, 125

Conjugation. *See* Horizontal gene transfer

Cyanostylon, 30

D

DDC model. *See* Duplication–degeneration–
complementation model

De novo gene evolution

emergence of genes

evidence, 183–184

mechanisms, 182–183

orphan genes, 181–182

overview, 181

protein-folding problem, 184–185

DinB

fidelity, 103

horizontal gene transfer, 106

Duplication. *See* Gene duplication

Duplication–degeneration–complementation
(DDC) model, 174

E

EAC model. *See* Escape from adaptive conflict model

Entophyalis, 30

Escape from adaptive conflict (EAC) model, 178

Escherichia coli

genome organization, 192–193

genome sequencing, 3

Eukaryotes

origins, 13–15

prokaryote complexity comparison, 117–118

F

Fossils. *See* Microfossils
